ASP.NET 2.0 Internals

While 100 percent backward compatible with ASP.NET 1.1, ASP.NET 2.0 brings a number of internal changes to ASP.NET. These include changes to the code model, compilation, page lifecycle, and more. This article outlines those changes.

New books from Microsoft Press

Check out new and upcoming titles three weeks before they hit the shelves, plus any we've released in the past couple of months.

Salaries Rise for MCP's

ChannelMinds cites a recent report that shows MCP salaries are on the rise. Find out which areas of specialty are most in demand.

developersDen.com Website Updates

If you haven't visited our website lately, go check it out. We have given it a complete overhaul as part of our ongoing commitment to better serve our customers. The dust has barely settled, so there may still be a few rough spots and there are a number of upcoming additions, but hopefully the new design will prove beneficial as both an easy to navigate index of our service offerings, as well as a valuable resource for the software development industry. As always we welcome your feedback and suggestions and don't forget to visit often as there are a number of surprises coming your way.

Steve Trapani - Director, IT Services

We are extremely pleased to announce that as of August 1, 2004 Steven Trapani has accepted the position of Director, IT Services with developersDen, Inc. a leading provider of IT Services located in Castle, Rock CO. Steve brings a solid background in software and hardware experience to our organization and will be responsible for implementing our new service offerings which include: website design and development, website hosting services, and custom PC workstation and server integration and installation.

.NET Developer Training

One of the more challenging tasks facing IT professionals today is properly planning for the training needs of software developers. Back in the "Good Old Days", the list of available training classes was limited and decisions fairly simple. With the advent of .NET, the playing field has been altered dramatically. Every week, I receive numerous requests concerning how to design a successful training plan that is cost effective. Our approach to designing training roadmaps is to base our recommendations on two endpoints: "Where are you at now?" and "Where do you want to go?" While this may at first seem to be a simplistic approach, in our experience it is the failure to consider these two key questions that often result in a training plan that is both ineffectual and costly. If you are struggling with how to design an effective plan for yourself or your organization, please contact us today for a free evaluation and consultation at:
